PTS and Mark Andy Announce Business Alliance

Clearwater, FL – February 21, 2007 – Clearwater, FL-based Printing Technology Services, Inc. (PTS), a leader in integrating variable data inkjet printing systems into existing web presses and finishing systems, announced today that the Company has entered into a business alliance with St. Louis, MO-based Mark Andy, Inc. Mark Andy is the world’s leading manufacturer of narrow web printing equipment. As part of the agreement, PTS’ JetFlex™ inkjet printing systems, can be fully integrated into any Mark Andy flexographic press, to deliver variable data printing (VDP) capability, in line with the flexographic presses. The JetFlex system incorporates digital printing products using Hewlett-Packard TIJ 2.5 thermal ink jet technology.

The business alliance between PTS and Mark Andy combines the strengths of the integrated variable data JetFlex inkjet printing systems offered by PTS, and the flexographic presses and finishing options offered by Mark Andy, to provide significant value-added benefits for flexographic printers world-wide.

“We’re very excited about the possibilities this relationship opens up for our customers around the world,” commented Curtis Miller, President of PTS. “As a result of this partnership, flexographic printers will be able to print both static and variable data in one pass – saving time and money, and opening up new business opportunities for our customers. Customers also benefit from the increased confidence of choosing a product that is endorsed by the market leader, which is Mark Andy.”

About PTS

PTS specializes in integrating variable data inkjet printing systems into existing web presses and finishing systems. PTS provides the JetFlex™ variable data inkjet printing systems (and related products) world-wide through a growing network of sales and distribution channels. PTS delivers high value to their customers by integrating digital inkjet printing capability into existing web presses and finishing equipment, thereby extending the value of the investment that customers make into their conventional printing and finishing equipment, as well as significantly expanding the business opportunities for those customers.
